

Hitch Installation Instructions

The pictures below may look different than your motorcycle or hitch but the steps for installation are the same

Install left and right side plates as shown below. Do not tighten yet!

Install bottom plate on top of the side plates. You should be able to move the side plates to get the base plate on top of them.

Insert 4 carriage bolts (included) through the side plates and base plate. Install 4 nuts (included) onto the carriage bolts as shown below.

Now tighten the side plate bolts and the bottom plate bolts.
Install ball (not included).
